

TESTING FOR SUCCESS

Quizzes are a great way of testing student's abilities, and instruct them on how to improve themselves. So why don't we do them more often?

CRITICAL THINKING
PROBLEM SOLVING

FLIP THE PAGE ONCE YOU'RE READY!

Here's all the stuff you need before you start, once you are ready, flip the page over to see the steps!

DESIGN HACK

Alternatively, instructors can create the questions to assess learners' understanding of content covered in each day's class.

TIME

This is up to you, depending on how long you make your quiz and how long you allow your students to take it.

MATERIALS

- Student access to Instructors email (at the end of class); pre-made form for students to submit questions (paper or microsoft forms); or extra paper to give to students; pens/pencils

PREP

Make your quiz:

- Either instructor creates each quiz to give at the end of each class or instructor chooses question(s) from student submissions to use as the daily quiz.

PARTICIPANTS

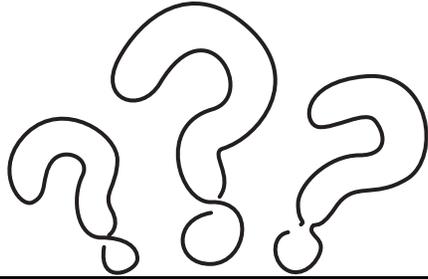

A CLASS OF HUMANS

DIFFICULTY

2/5 DOABLE

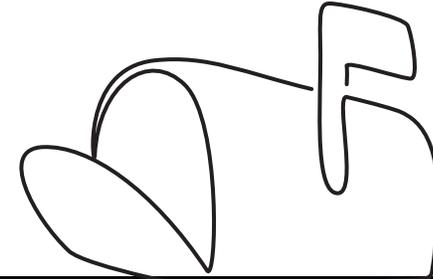

1

SET THE GROUND RULES.

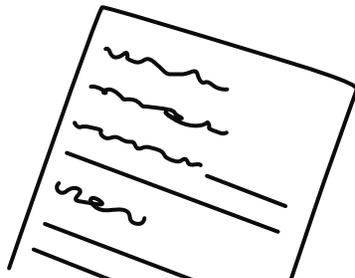

- Explain the concept of daily content quizzes to learners.
- Questions can be created by the instructor or by learners.
- Content quizzes help learners see the value of testing themselves on a regular basis and ensure content is understood.

2

GET READY FOR SOME FEEDBACK.

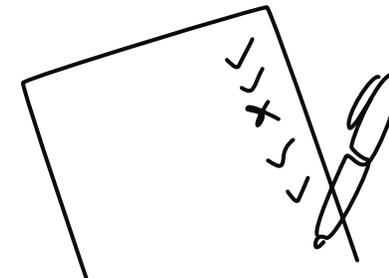

- Have a form (paper or Microsoft form) or email address available for learners to submit questions.

3

THEY CAN MAKE THEIR OWN QUIZZES!

- Have learners submit questions at the end of class to be used for a quiz at the beginning of the next day's class.
- Allow time at the end of class for a prepared quiz on that day's topic.
- This could be included as part of a class participation grade.

4

CHECK THEIR UNDERSTANDING.

- Ask students to hand in quizzes at the end of class. You might assign a mark or not; either way you can check for understanding (and hopefully help students establish the habit of creating quality questions and regularly testing their own knowledge).
